

How is Wind Energy Taxed in Indiana?

Tax revenue from installed **wind** projects in Indiana comes from property taxes! Wind projects increase the tax base of a county, reducing the burden on taxpayers.

Property taxes

Indiana counties cap the amount of property taxes they can collect each year at a fixed rate. When a wind project comes into a county the DLGF assesses the project to show how much money it will contribute to the annual property tax allotment.

Everyone else's property tax payments in the county will decrease to adjust for the wind farms property tax payments.

DLGF=

Indiana Department of Local Government Finance is a state agency that assesses property tax payments

Wind Projects Offer Many Benefits to Rural Communities

Benton County is now debt-free after wind projects brought a new source of tax revenue to the county.
